Finantsinspeksioon will start to use the new [STAR platform for releasing financial sector statistics](#) as it covers market participants in the financial sector more broadly than before, adds new data positions, and allows data to be viewed and processed in a more user-friendly way.

Finantsinspeksioon publishes data on credit institutions, payment institutions, fund managers and funds, and for the first time will start to publish data tables on creditors and credit intermediaries and insurance brokers. It will also restart publication of aggregate data on investment firms.

Finantsinspeksioon publishes systematised or statistical data on subjects of financial supervision in the interests of market transparency, showing the financial position of the sectors and the services they provide in generalised form. The new strategic goal of Finantsinspeksioon is to develop digital solutions. The new statistical release application STAR allows all who are interested to assess trends in the financial sector more precisely, with the data presented in Excel, CSV, XML and HTML formats, making them technically easier to process and download.
